- View both TX3 Voice Entry and 3rd party Access Control system events in 1 window

- On board power from TX3 Voice Entry main board

TX3 Wiegand Output

Description

The TX3 Wiegand Output is an optional module that is built to integrate any Wiegand compatible 3rd party access control system with Mircom's TX3 Voice Entry systems. The wiegand output securely mounts on the TX3 main lobby board with excellent mechanical and electrical integrity. A Voice Entry system with the Wiegand output can send facility and card code to a 3rd party Card Access system. This allows the TX3 Voice Entry system to work as a keypad card reader. The wiegand output can send 3 different event data

Specification	
Size	2.6" x 3.25"
